

Nani - Dockshelter Type T-TAD

The **Nani-Dockshelter type T-TAD** protects the personnel and the commodity during the loading or unloading from influences of the weather. This type of door shelter is used with an external ramp, where the truck can be load or unload from the rear or also from the sides. The dock shelter consists of a front, a rear and, depending upon tunnel length, one or more middle frameworks, of stable, hot-dip galvanized steel sections.

The rear framework is fastened before the loading hatch to the front. The middle frameworks form the closed porch together

with the circulating PVC tarpaulin. Into the front frame profiles the 3 mm thick PVC tarpaulin aprons with two fabric inserts drawn and seal the truck outstanding.

The side tarpaulins are provided with yellow strips as starting assistance.

All frameworks are connected by parallel led arms.

T-TAD is served alternatively by hand or it is equipped with an electrical motor.

To the scope of supply belong the complete dock shelter and all mounting elements and sealing materials.

Changes to specification maybe made without prior notification.
